Ping/Traceroute Assignment
Due: Tuesday, April 17

1) Pick 4 web sites and/or computers on the Internet

   – One in your dorm/apartment/house/ ...

   – One on campus

   – One your frequently access

   – One "really far away"

2) For each of those, use "traceroute" to determine the path from the BIN lab to that machine through the Internet

3) For each of those, use the 'ping' program to generate 50 datapoints giving the 'distance' to that machine from the Bin machine

4) hand in:

   – Listing of machines

   – text output from traceroute

   – graph of the ping times vs. time for each IP address (any program is fine)
